**FABRINET
CONFLICT MINERALS REPORT
YEAR ENDED DECEMBER 31, 2015**

I. Introduction

We provide advanced optical packaging and precision optical, electro-mechanical and electronic manufacturing services to original equipment manufacturers (OEMs) of complex products, such as optical communication components, modules and sub-systems, industrial lasers and sensors. We offer a broad range of advanced optical and electro-mechanical capabilities across the entire manufacturing process, including process design and engineering, supply chain management, manufacturing, advanced packaging, integration, final assembly and test. Certain products that we manufacture for our customers contain materials or components that use tin, tantalum, tungsten and/or gold (“3TG”). Due to the depth of the supply chain, we are far removed from the sources of ore from which these metals are produced and the smelters/refiners that process those ores; the efforts undertaken to identify the country(ies) or origin of those ores reflect our circumstances and position in the supply chain. The amount of information available globally on the traceability and sourcing of these ores is limited at this time; this situation is not unique to us. We have taken steps we believe to be reasonable under the circumstances to identify the applicable smelters and refiners of such 3TG metals in our supply chain; however, we believe that the smelters and refiners of the 3TG contained in the products we manufacture for our customers are best situated to identify the sources and countries of origin of the 3TG.

We do not directly manufacture products but “contract to manufacture” branded and generic products containing 3TG on behalf of our customers. Our due diligence efforts were undertaken on the exclusive and/or privately-branded products sourced directly by, and manufactured for, us in 2015.

II. Reasonable Country of Origin Inquiry (RCOI)

Direct suppliers were asked to provide answers to the Electronic Industry Citizenship Coalition (EICC) / Global e-Sustainability Initiative (GeSI) Conflict Minerals Common Reporting Template reflecting Fabrinet’s position on the supply chain (the “EICC Template”). The EICC Template includes questions regarding a direct supplier’s conflict-free policy, its due diligence process, and information about its supply chain such as the names and locations of smelters and refiners and the origin of 3TG used by those facilities. The EICC Template is regarded as the most common reporting tool for conflict minerals content and sourcing information worldwide, developed by several of the world’s leading consumer electronics companies.

We reviewed questionnaires received for completeness and consistency of answers. Suppliers were required to provide corrections and clarifications where needed. Based on the RCOI, we do not have sufficient information from our direct suppliers to determine the source of the necessary 3TG contained in the products we manufacture for our customers.

We believe our RCOI process was reasonably designed and performed in good faith, but there are inherent limitations in the information provided to us by third parties, including the possibility of information being inaccurate, incomplete or falsified despite our efforts to validate and confirm the information.

III. Due Diligence Program

We designed our overall conflict minerals procedures based on, and in conformity with the five-step framework of set forth in the Second Edition of the Organisation for Economic Co-operation and Development's *Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas*. We implemented appropriate elements of the five-step framework as were reasonably applied to our circumstances and position in the supply chain as a "downstream" company with little to no direct influence on smelters/refiners. The five step framework consists of:

(1) Establish strong company management systems

- We have adopted and published our Conflict Minerals Sourcing Policy, a copy of which is publicly available on our website at <http://fabrinet.com/services/supply-chain>
- We have created a conflict minerals task force led by our supply chain management organization to implement our Conflict Minerals Sourcing Policy.
- We have communicated our Conflict Minerals Sourcing Policy to direct suppliers.
- We have conducted awareness sessions concerning the commitments and requirements expected of our suppliers.

(2) Identify and assess risks in the supply chain

- We identified direct suppliers that supply product or material that may contain conflict minerals.
- We conducted supplier surveys using the EICC Template
- We reviewed responses to the EICC Template for completeness and consistency of answers. Suppliers were required to provide corrections and clarifications where needed.
- We compared smelters and refiners identified by suppliers to the Conflict-Free Sourcing Initiative's ("CFSI") list of validated conflict free facilities for initial risk screening.

(3) Design and implement a strategy to respond to identified risks

- We reported to senior management on direct suppliers' responses to our conflict minerals information requests, including updates on monitoring and tracking corrective action and risk mitigation efforts (where applicable).
- Using a third party service, we compared smelters and refiners identified by suppliers to the CFSI lists of validated conflict free and verified facilities and the U.S. Department of Commerce "Reporting Requirements Under Section 1502(d)(3)(C) of the Dodd-Frank Act World-Wide Conflict Mineral Processing Facilities" (<http://www.ita.doc.gov/td/forestprod/DOC-ConflictMineralReport.pdf>) and conducted our own supplemental research on smelters and refiners.
- We developed a risk mitigation plan that allows for continued trade with a supplier during the supplier's risk mitigation efforts.

(4) Carry out independent third-party audit of supply chain due diligence at identified points in the supply chain

- We do not perform or direct audits of 3TG smelters or refiners. We rely on audits conducted by third parties through our membership in the EICC supplier self-disclosures of certification status, and our policy and procurement practices that encourage suppliers to purchase materials from audited smelters and refiners.

(5) Report on supply chain due diligence

- We communicated our Conflict Minerals Report on our company website at <http://fabrinet.com/services/supply-chain>

IV. Product Determination

We received inconclusive data from our direct suppliers, and material source information is still developing. Therefore, we are unable to make a definitive determination about the source of 3TG in the products we manufacture for our customers. At the same time, we received no information from our direct suppliers indicating that the 3TG in our Covered Products (as defined below) directly or indirectly financed or benefitted armed groups in the Democratic Republic of the Congo and the adjoining countries of Angola, Burundi, the Central African Republic, the Republic of the Congo, Rwanda, South Sudan, Tanzania, Uganda and Zambia. Some suppliers disclosed to us that scrap/recycled sources of 3TG were identified in their supply chains and did not require due diligence.

V. Product Description

Our customer base includes companies in complex industries that require advanced precision manufacturing capabilities, such as optical communications, industrial lasers and sensors. The products that we manufacture for our OEM customers include: selective switching products; tunable transponders and transceivers; active optical cables; solid state, diode-pumped, gas and fiber lasers; and sensors (collectively, the "Covered Products").

We identified the following smelters and refiners that have achieved Conflict Free designation by the CFSI or an audit program with which CFSI has mutual recognition, are actively in the process of obtaining the designations, or for which we independently obtained country of origin information. We were unable to definitively link the identified smelters and refiners to only those products and materials in our supply chain; therefore, the following list likely contains more processing facilities than are actually in our supply chain or Covered Products.

| <u>Metal</u> | <u>Verified Refiners</u> |

Countries of origin identified:

Angola, Argentina, Armenia, Australia, Austria, Belarus, Belgium, Bolivia, Brazil, Burundi, Canada, Chile, China, DRC- Congo (Kinshasa), Egypt, Estonia, Ethiopia, France, Germany, Ghana, Greece, Guinea, Guyana, Hong Kong, India, Indonesia, Italy, Japan, Jersey, Kazakhstan, Kyrgyzstan, Laos, Malaysia, Mali, Mexico, Mongolia, Morocco, Mozambique, Myanmar, Namibia, Netherlands, Niger, Nigeria, Papua New Guinea, Peru, Philippines, Poland, Portugal, Romania, Russia, Rwanda, Saudi Arabia, Sierra Leone, Singapore, South Africa, South Korea, Spain, Suriname, Sweden, Switzerland, Taiwan, Tajikistan, Tanzania, Thailand, Turkey, United Arab Emirates, United Kingdom, United States, Uzbekistan, Vietnam, Zambia, Zimbabwe. Covered Countries were identified only for CFSI audited facilities.

* Through our RCOI, certain suppliers identified Al Kaloti Jewelers Factory Limited (“Al Kaloti”), Fidelity Printers and Refiners, and Sudan Gold Refinery as sources of gold in their supply chains. These refineries are not audited by the CFSI and public information indicates the possibility that these are high-risk facilities. Because the conflict minerals information from these suppliers was presented to Fabrinet as “company-level” responses rather than Fabrinet product-specific responses, it is uncertain if these gold refineries are actually in our supply chain. We plan to conduct additional research on whether these refineries are, in reality, present in our supply chain. If we determine that material sourced from these refineries is present in Fabrinet’s supply chain, we will work with our suppliers and the CFSI to conduct third party audits of the facilities. Should the facilities decline to participate in an audit, we will evaluate our relationship with that supplier and explore alternatives. In addition, one tin smelter (PT Pelat Timah Nusantara Tbk) was reported by some suppliers in their supply chain; however, this smelter suspended operation prior to 2015 and tin originating from this smelter is not expected to reasonably be in our supply chain for 2015.

VI. Steps to Improve Due Diligence

We will continue to communicate our expectations and information requirements to our direct suppliers. We will also continue to monitor changes in circumstances that may impact the facts or our determination. Over time, we anticipate that the amount of information globally on the traceability and sourcing of these ores will increase and improve our knowledge. We will continue to make inquiries to our direct suppliers and undertake additional fact and risk assessments where potentially relevant changes in facts or circumstances are identified. New suppliers will be reviewed for conflict minerals conformance during initial business reviews. If we become aware of a supplier whose due diligence needs improvement, we intend to continue the trade relationship while that supplier improves its performance. We expect our suppliers to take similar measures with their suppliers to ensure alignment throughout the supply chain.

VII. Independent Private Sector Audit

Not required for calendar year 2015.
